Software Engineer · AI Systems · Full-Stack & Edge Projects

PROFESSIONAL SUMMARY

B.E. Electrical Engineering student (PEC Chandigarh, 2027) building **AI systems**, **edge/IoT pipelines**, and **full-stack web apps**. Recent BEL internship on energy data and ISO 50001 readiness. Ships end-to-end projects with strong **DSA/OOP** fundamentals — including a public [portfolio site](#) and [e-commerce storefront](#).

EDUCATION

Punjab Engineering College (PEC), Chandigarh

B.E. in Electrical Engineering | Focus: DSA, OOP, AI-enabled software systems
Class 12 (CBSE): 85% | Class 10 (ICSE): 95%

Aug 2023 – Jun 2027

PROJECTS

Personal Portfolio Website · [View Portfolio](#)

Next.js · TypeScript · Framer Motion · CSS Modules

- Built a responsive personal portfolio with animated sections for about, skills, projects, and contact — including light/dark theme and project deep-links.
- Hosts resume download and links to shipped work including [E-Commerce App](#) and [E32Log](#).

Harbor & Co. — E-Commerce Web Application · [View Project](#)

JavaScript · HTML/CSS · Node.js · Express · REST APIs

- Delivered a full-stack storefront with catalog search/filters, product detail, persistent cart, and checkout order flow.
- Implemented REST APIs for products, cart validation (shipping/tax), and order creation; added light/dark theme toggle.

E32Log — Real-Time Vehicle Telemetry & OBD-II Logger · [GitHub](#)

C++ · Python · ESP32 · OBD-II · Embedded

- Designed a real-time telemetry pipeline ingesting 10+ vehicle parameters over OBD-II on ESP32 with sub-second polling.
- Logged 1000+ live records with modular OOP design for low-latency acquisition, buffering, and wireless/local logging.

Intelligent Traffic Surveillance System

Python · YOLOv8 · DeepSORT · OpenCV · Edge AI

- Built real-time multi-vehicle detection/tracking with ROI-based counting, red-light violation logic, and ambulance-aware exception handling.

EXPERIENCE

Engineering Intern — Bharat Electronics Limited (BEL)

Jan 2026 – May 2026

- Analyzed operational datasets from substations, DG sets, and solar systems to surface anomalies and actionable insights.
- Built energy-data tracking workflows supporting ISO 50001 compliance readiness.
- Contributed to sustainability measurement efforts recognized at the GreenTech Energy Awards.

TECHNICAL SKILLS

Languages & Frameworks: Python, C++, Java, JavaScript/TypeScript, FastAPI, Node.js, Express, React/Next.js, REST APIs, SQL

AI / ML & Data: RAG pipelines, LangChain/LangGraph, Prompt engineering, Pandas, Scikit-learn, OpenCV, YOLOv8

Systems & Tools: PostgreSQL, MongoDB, Docker, Git, Linux, ESP32/IoT, DSA, OOP
